vanquish

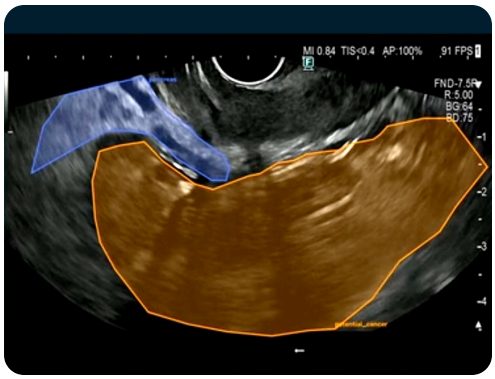

PANDA · AI FOR ENDOSCOPIC ULTRASOUND

Finding GI cancers earlier.

Pancreas | Esophageal | Gastric

PANDA works on the live EUS video. It flags suspicious regions while the scope is still in place, when another look is still possible.

- **Pathology-confirmed** U.S. EUS cases, labeled by our team and reviewed by interventional endoscopists.
- **Outlines, flags and characterizes.** Tumor, cyst or normal tissue. The endoscopist makes every call.
- **Works with the equipment you have.** Standard video output from major EUS systems. No new scope.
- **Proprietary intellectual property** protects the technology behind PANDA.

Investigational software, shown for illustration.
